

# Telehealth

*Communicate with patients from anywhere.*

## HEALTHCARE CHALLENGES

Today, providers and healthcare systems are experiencing challenges in meeting the demand for medical services. Telehealth provides a solution to help them care for patients while limiting exposure.

In order to meet the increased need of telehealth, providers want solutions that connect seamlessly to existing platforms, are simple to use, can be used in a variety of environments, and are cost effective to scale.

Jabra solutions allow medical professionals to connect from an exam room, office or home to provide real-time support and to maintain end-to-end communication.

## HEALTHCARE SOLUTIONS

Healthcare is continually innovating with technology advancements that enable patients to interact with providers in new ways.

By using Jabra audio and video collaboration, healthcare organizations can improve the experience to be clearly heard and seen by clients, staff and colleagues. Take audio and visual technical challenges out of your daily practice and focus on what is important.

Our simple to use, easy to deploy, USB plug-and-play audio and video solutions allow healthcare organizations to provide connectivity, support and engagement with their patients and improve the health of their communities.

## DAY-TO-DAY UTILIZATION

- 

Personalized Healthcare – puts a face to a name
- 

Education and training – educate professionals on procedures, processes and latest safety measures
- 

Virtual rounds & patient monitoring– enabled physicians to limit exposure and bring family members to the virtual bedside
- 

Preventions & Wellness – support patients between visits
- 

Triage Urgent and specialty care – increase access to care / mitigate emergencies
- 

Command and Control Centers – support internal communication w/ administration, staff, families, public health authorities and other community organizations
